

## Report

- **Patient Information:**

- Name:
- Date: 15 November 2024 (LMP)
- Expected Delivery Date (EDD): 22 August 2025
- Gravida IDU TERU S
- Age: Not specified in the audio note

- **Findings:**

- The gravid uterus shows smooth walled gestational sac.
- Fetal pole is seen with cardiac activity appreciated, indicating early intrauterine pregnancy.
- Decidual reaction is good.
- Crown-rump length (CRL) measured at 3 mm, suggesting a gestational age of approximately 5 weeks and 6 days.
- A tiny blood collection measuring 5.9 x 2.8 mm is seen just above the internal os.
- Cervix measures 4 cm.
- No adenexal pathology noted.
- No free fluid is observed in pouch of Douglas.

- **Comments:**

- Early intrauterine pregnancy of age 5 weeks and 6 days, with delayed conception indicated.
- Expected Ultrasound for Delivery Date (UIGDD): 30 August 2025
